

Maintenance and care.

- * Always smoke the pipe completely down.
- * Keep the pipe free of coke cinders, the meerschaum will not burn like a briar pipe.
- * Never Soak the pipe inside with any kinds of liquid or cleaning preparation.
- * The surface of the pipe can be cleaned with a damp piece of soft cloth.
- * Never keep your meerschaum pipe in a pocket together with keys or coins; scratches cannot be removed.
- * Please keep your pipe in its box or a cloth bag while you are carrying the pipe with you.
- * Always turn the stem Clockwise when you pull it of and put it on.
- * Never try to put an unoriginal stem on the pipe, this can cause permanent damage to the pipe. Please contact us for repair, should the need arise.
- * Finally, meerschaum is a delicate material, never knock the pipe against an ashtray, use a match to empty the pipe instead.
- * If you follow these simple rules, the meerschaum pipe will give you many years of unsurpassed smoking pleasure.

MERSKUM GALLERIET was established in 1991 by ARNE URUP in the center of Copenhagen, metropol of pipesmokers, as a forum for new trends of pipedesign.

MERSKUM GALLERIET produces high quality pipes in close cooperation with Turkish miners and manufacturers in order to offer the best function, quality and design, to provide the optimal smoking pleasure.

Arne Urup has made and distributed meerschaum pipes for fifteen years. Knowing the high demands of the discriminating Pipe Smoker, he has developed a more functional construction of meerschaum pipes to obtain the ultimate in cleaning and smoking pleasure.

The patented Urup system specifications: Pipestem with 6.5 mm integrated tap / insert, for the best cleaning facilities and smoke flow, fitted into a 9 mm threaded polyethylene lining, which is screwed into the neck of the pipe to protect against wear.

These pipes are available in a number of models and sizes, smooth classic or the extra cooling lattice design. Mounted with stems of polyester, ebonite, cumberland, horn of buffalo, or even genuine amber.

Amber stems are carefully selected from large pieces of natural amber, cut into crackless pieces of stemsize. These are turned and handfitted with a URUP pipe.

About Meerschaum

Meerschaum, magnesium silicate, is a natural stone. The unique heat resistance and the light weight of the stone, as well as the tar absorbing properties, makes this material ideal to make pipes of unsurpassed quality. The absorbing ability of the stone insures the pipe ages with dignity and beauty, giving each pipe its unique yellow-brown lustre.
