# KRISWILL

Pipesmoking is an art to learn properly, but no difficult art for a man smoking a Kriswill Pipe.

Pipesmokers demand much from their pipes as well as from the pipemakers. Pipemaking is an old trade and in possession of numerous valuable traditions.

In the modern pipemaking enterprise of Kriswill the good traditions are preserved, and the finished product is an example of the pipe-maker's love of his work, his skill and knowledge of the material.

Kriswill Pipes are created for the good taste, and the many Kriswill models ensure that there will always be a Kriswill Pipe satisfying every degree of temperament.

Kriswill Pipes are always in perfect balance — the mouthpieces are designed to ensure a good and safe »bite« and it is established as a matter of course that the finest material available is selected for every single pipe.

Kriswill Pipes are handmade in accordance with the old traditions — another reason why Kriswill is your best choice.

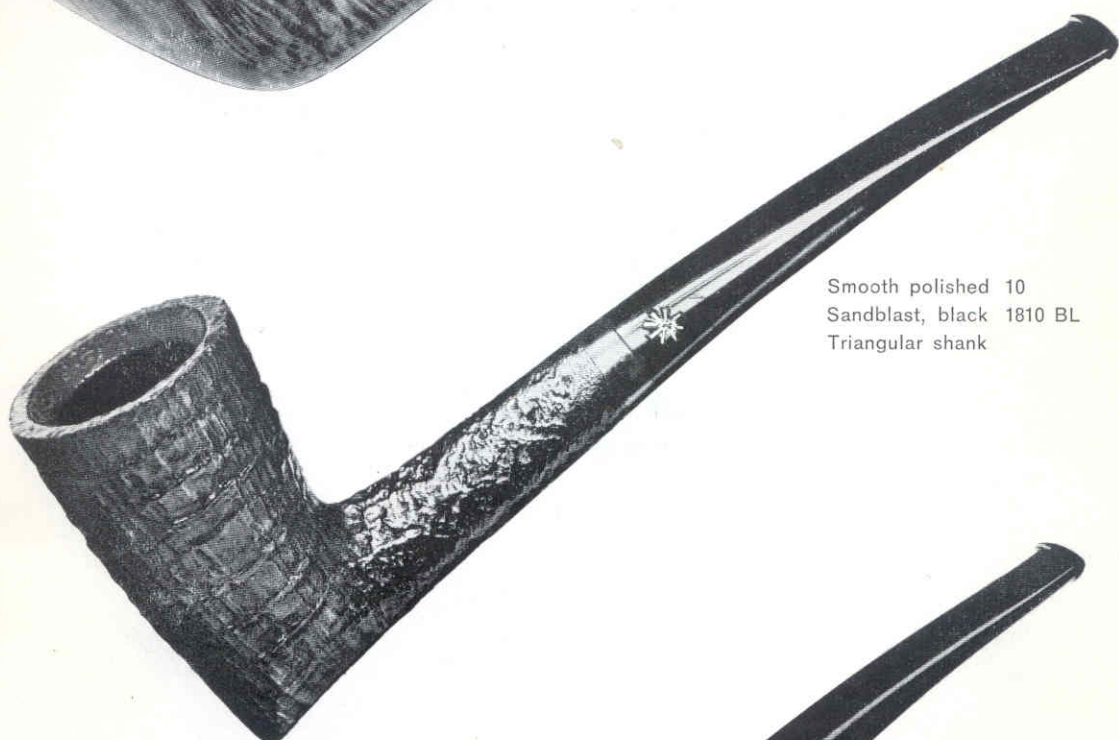

Today's pipes have practically all been made from Briar Root from the heather called ERICA ARBOREA. This heather grows uncultivated in the Mediterranean area and only on mountain slopes where access is very difficult.

smooth and fit to the moutpiece. By the way the mouthpiece is a very essential detail, and that is why Kriswill make a point of selecting mouthpieces of the highest grade for their pipes. The feeling of the mouthpiece in your mouth is of the greatest importance for the perfect enjoyment of your pipe.

not only to protect the surface of the Briar, but also to make the characteristic structure appear on the smooth pipes. — Sandblast pipes are treated in an similar way, but the sandblasting has the effect that the structure of the Briar appears in relief. The pipe gets its distinctive character through the uneven surface, which, however, gives a better cooling off of the bowl and reduces the weight of the pipe.

2. For the first dozen times fill it only half full.
3. Tobacco should be packed firmly, but not too tightly. You must be able to draw through the pipe when packed.
4. Light the pipe and smoke slowly.
5. Continue the smoking until all the tobacco is burnt, remove the ashes carefully, and clean the smoke channel with a good pipe cleaner.
6. Never refill a hot pipe.

ACTUAL SIZE

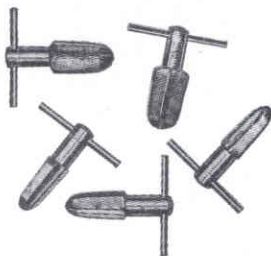

Kriswill »Supreme« Pipes are cut individually by hand and shaped in accordance with the grain of the Briar. Consequently no two »Supreme« Pipes will ever be alike. These pipes are available in limited numbers only as very few ebauchons possess the grain demanded for a Kriswill »Supreme« Pipe.

# KRISWILL *Supreme*

How to take care of your Kriswill Pipe:

1. When you do not smoke your pipe it should be placed in a rack with the mouthpiece upwards. You must have several pipes for alternate smoking.
2. The pipe rack should not be placed too close to a radiator, fire-place or similar heating element. Nor should it be exposed to direct sunshine.
3. A part of the carbon deposit («cake») in the bowl must be removed from time to time. Use a reamer suiting the hole in the bowl. Never use a knife or similar instrument, you risk that the bowl may later crack.
